System i model 525 Express Configurations feature:

- i5/OS licensing by user, consistent with industry-accepted terms and concepts
- Affordable entry price
- · Design for both traditional and new business solutions

800-IBM-CALL Reference: YE001

Overview

The System i[™] model 525 focuses on small- to medium-sized business needs. This 1/2-way system, with full POWER5+[™] performance and i5/OS[™] Licensing by User, redefines the cost to acquire a System i solution.

If you need to support 40 or more concurrent i5/OS¹ users and require greater systems scalability and partitioning capability than the model 515, the model 525 offers an attractive entry point. It includes the options you value all wrapped up in an easy-to-install, manageable system that provides the performance and reliability you expect from IBM.

Features and benefits include:

- Capable of running i5/OS, Linux[™], and AIX 5L[™] applications on a single system and integrating IBM xSeries® servers running Windows[™]
- 1/2-way system with a 1.9 GHz POWER5+ processor
- Two system configuration options, Express and Capacity BackUp (CBU), to fit your system requirements
- Support for 30 to unlimited concurrent i5/OS users with a P10 software tier
- Customizable to your specific order
- Security and virus resistance to help ensure your system's availability
 - An i5/OS user is a person who accesses the program via one or more connections, exchanging credentials (form of user identification) directly with the program or indirectly through application or middleware software supported by the program. You must acquire entitlement for the maximum number of i5/OS users simultaneously authenticated on the machine

Key prerequisites

i5/OS V5R4

Planned availability date

April 20, 2007

Description

Earlier model 520 systems provided unlimited i5/OS user license entitlements but offered a range of systems with small-to-large amounts of computing capacity (batch and 5250 CPW). A growing number of small- to mid-size clients requested larger amounts of computing capacity for a wider range of applications. The new i5/OS Licensing by User offered with the model 525 gives you added flexibility. If you have a relatively modest number of system users, you may find the model 525 to be a good match for your business. For example, the 1/2-way 9406-525 with one processor activation offers a 3x CPW rating compared to the 1-way 9406-520 1200 CPW Enterprise Edition. The model 525 software tier is P10 versus the model 520 1/2-way P20 software tier.

In addition to an i5/OS processor license entitlement, the model 525 includes license entitlements for 30 to unlimited concurrent i5/OS users in blocks of 10 users. Also, if you have a large number of "external" i5/OS users (clients, vendors, or business partners) and a more modest number of "internal" i5/OS users (company employees or equivalent), a special external unlimited user entitlement is available.

The model 525 offers several Capacity on Demand options that make it possible to activate additional processor resource. Capacity Upgrade on Demand, On/Off Capacity on Demand, Reserve Capacity on Demand, and Trial Capacity on Demand are available.

To take advantage of Capacity on Demand, you need to permanently activate only one of the two processors. Then, as needed, a key activates the On/Off Capacity on Demand option in order to satisfy capacity needs associated with business growth or peaks.

Using Capacity on Demand options and per processor granularity for i5/OS licensing and software maintenance, you can efficiently allocate resource for your applications, regardless of your operating environment.

The model 525 does not have an upgrade path to a larger model such as the 550 or 570; however, upgrades into the model 525 from the model 520 or 810 are available. These upgrade paths are essentially the same as the upgrade paths into the 520 1/2-way.

Each 525 system is built to your specific order and can be customized for your exact hardware placement and IBM software preload. The model 525 offers an integrated set of hardware, including two 1 Gbps Ethernet LAN ports and a disk, tape, or DVD drive controller in the base. It is available as either a deskside/tower configuration or as a rack-mount configuration. As a rack-mount configuration, it can be placed in a 19-inch rack and requires 4 EIA units or 4U.

The model 525 is a 1/2-way system that uses a 1.9 GHz POWER5+ processor with L3 cache. It delivers 3800 or 7100 CPW (batch or 5250). The model 525 has a maximum of 32 GB of memory, 278 disk drives, and 90 PCI slots.

Model 525 configurations overview

The minimum functional system consists of the base system unit, base features, and selected priced features. It supports a large selection of I/O including a variety of LAN and WAN adapters, an iSCSI adapter, SCSI tape and disk controllers, Fibre Channel adapters, twinax workstation controllers, multiple I/O drawers/towers, and more.

Each model 525 system unit has:

- Maximum of 32 GB of memory
- Eight memory slots
- Six PCI-X slots
- Eight disk slots (four optionally enabled)

- · One half-high slot for removable media
- · Two slimline slots for DVD drives
- Two 1 Gbps/100 Mbps/10 Mbps Ethernet LAN ports
- · Two SPCN ports
- · Two serial ports
- Two HMC ports
- Two USB ports
- Disk/DVD/tape controller

i5/OS V5R4 supports the use of all of the preceding hardware elements except one slimline slot, two serial ports, and two USB ports. These components are reserved for other operating systems running on the model 525.

Neither the integrated controller nor the integrated Ethernet adapter, which drives the two Ethernet LAN ports, uses any of the six PCI-X slots. You can add 40 MB write cache to the integrated disk controller for a disk performance boost and to enable RAID-5 capability and still require no PCI-X slot. An IOP or ECS WAN adapter can be included as part of the edition definition. Each uses one of the six PCI-X slots.

The model 525 system unit supports hot-plug disk slots, hot-plug PCI-X slots, and redundant hot-plug cooling fans. An optional redundant hot-plug power supply is available.

Order the model 525 as a 9406-525. It comes with a one-year hardware warranty with 24 x 7 and same-business-day service.

The model 525 system unit can be greatly expanded using I/O expansion towers/drawers that include additional PCI slots and disk slots. Up to six I/O towers/drawers can be attached via a high speed link (HSL) loop. In addition, Integrated xSeries Adapters can be located on the HSL loop, providing IBM System x integration.

Summary of System i 525 configurations

Server feature	0909
Processor group	P10
Processor (1.9 GHz)	8330x1 (1/2-way)
Processor CPW 5250 OLTP	3800/7100 3800/7100
Main storage (minimum) (maximum)	1 GB 32 GB
Disk storage (minimum) (maximum)	35 GB 39 TB
Disk arms (maximum)	278
Internal CD/DVD/tape (maximum)	14
External tape/optical/CD/DVD (maxim	um) 36
Physical packaging (maximum) I/O towers/drawers PCI card slots	6 90
Twinaxial devices (maximum)	1920
Communication lines (maximum)	192
LAN lines (maximum)	36
Windows integration Integrated xSeries Servers Integrated xSeries Adapters	18 8

Note: Some maximums and combinations of devices may be subject to configuration restrictions.

Main storage consideration: The model 525 uses DDR2 memory DIMMs that are plugged in pairs. Each 525 DDR2 memory feature represents one pair of DIMMs. A model 525 requires a minimum of one and a maximum of four memory features.

System i5[™] 525 configurations

The 9406 model 525 is offered as an Express Configuration or as a Capacity BackUp (CBU) Configuration.

Three Express Configurations consist of 30, 150, or an unlimited number of concurrent i5/OS user entitlements. You can add i5/OS user entitlements to the 30 or 150 entitlement Express Configurations.

A CBU Configuration includes a financially attractive model 525 when you purchase a second system for backup, high availability, and disaster recovery. The CBU Configuration includes 30 concurrent i5/OS user entitlements with the option to add more.

A CBU system delivers the capacity for role-swap operations — where the CBU system maintains application availability when a production system is down for planned or unplanned outages. You can activate a standby processor using On/Off Capacity on Demand, at no additional charge, in case of a disaster that takes down the primary system. "Disaster" is defined as an event recoverable from an offsite location only that has resulted from the unforeseen loss of a production system's computing capability due solely to forces beyond your control. To qualify as a disaster, the outage must be one that clearly, by its nature, requires a remote recovery operation. This means that the primary data center is no longer usable and the outage is not due to a hardware or software failure.

Before IBM ships a new CBU Configuration system, you must register a primary system in the same enterprise at the System i CBU Edition Web site. The primary system must be a model 525 or a model 520. The model 520 primary system cannot be an Express Configuration, Value Edition, High Availability Edition, or Telephony Edition. If you purchase a model 525 CBU to be paired with a model 520 primary machine, you may purchase additional i5/OS users and an unlimited option at a reduced price. After the initial acquisition of the 525 CBU, additional i5/OS users and the unlimited option are at normal prices.

You can purchase On/Off Capacity on Demand for temporary standby processor activation for the 525 as needed. However, high usage of On/Off Capacity on Demand outside a disaster can be costly. Permanent processor activations should be considered for ongoing requirements.

If you have permanently activated the second processor of the 525 CBU system and you do not already have an i5/OS processor license entitlement for that processor, you can temporarily transfer the second i5/OS processor entitlement from a primary 1/2-way 525, 2-way 520, or 1/2-way 520 to the 525 CBU system. This can be done if the primary system or application on the primary system goes down and the second i5/OS processor entitlement is not being used on the primary system.

Similarly, if you have i5/OS user license entitlements that are not being used because the 525 primary system or application on the 525 primary system goes down, you can temporarily transfer user entitlements from the primary 525 to the CBU 525. The i5/OS user entitlements that can be transferred are above and beyond the minimum 30 base i5/OS users included with any 525 Express Configuration. User license entitlements cannot be transferred from a primary 520 system to a 525 CBU system.

The 525 CBU Configuration includes an opportunity for an initial test of the switch-over environment. Three processor days are credited to your account. These processor days are provided at no additional charge with the On/Off Capacity on Demand function that can be used for the standby processor.

Upgrades are available for the model 525 CBU Configuration from smaller model 520 CBU Editions.

For CBU Configuration registration and additional information on the CBU Edition, visit

http://www.ibm.com/systems/i/hardware/cbu

For more information on edition content, including specific ordering details and IBM configuration implementation, visit

Model 525 Express Configuration 1 (#7790):

Function

- Support for multiple operating systems (i5/OS, AIX 5L, and Linux)
- Support for 5250 OLTP (up to maximum CPW)
- · Support for Capacity on Demand

Software

- Licensing for i5/OS (one processor license)
- Licensing for 30 concurrent i5/OS users (5722-SSC)
- iSeries[™] Access (5722-XW1) unlimited users
- IBM Director for iSeries (5722-DR1)
- IBM Web Enablement (5722-WE2)

Hardware

- 1/2-way system with one processor activation
- One WAN IOA

Model 525 Express Configuration 2 (#7791):

Function

- Support for multiple operating systems (i5/OS, AIX 5L, and Linux)
- Support for 5250 OLTP (up to maximum CPW)
- · Support for Capacity on Demand

Software

- Licensing for i5/OS (one processor license)
- Licensing for 150 concurrent i5/OS users (5722-SSC)
- iSeries Access (5722-XW1) unlimited users
- IBM Director for iSeries (5722-DR1)
- IBM Web Enablement (5722-WE2)

Hardware

- 1/2-way system with one processor activation
- One WAN IOA

Model 525 Express Configuration 3 (#7792):

Function

- Support for multiple operating systems (i5/OS, AIX 5L, and Linux)
- Support for 5250 OLTP (up to maximum CPW)
- · Support for Capacity on Demand

Software

• Licensing for i5/OS (one processor license)

- Licensing for unlimited concurrent i5/OS users (5722-SSC)
- iSeries Access (5722-XW1) unlimited users
- IBM Director for iSeries (5722-DR1)
- IBM Web Enablement (5722-WE2)

Hardware

- 1/2-way system with one processor activation
- One WAN IOA

Model 525 CBU Configuration 1 (#6910):

Function

- Support for multiple operating systems (i5/OS, AIX 5L, and Linux)
- Support for 5250 OLTP (up to maximum CPW)
- · Support for Capacity on Demand

Software

- Licensing for i5/OS (one processor license)
- Licensing for 30 concurrent i5/OS users (5722-SSC)
- iSeries Access (5722-XW1) unlimited users
- IBM Director for iSeries (5722-DR1)
- IBM Web Enablement (5722-WE2)

Hardware

- 1/2-way system with one processor activation
- One WAN IOA

Accessibility by people with disabilities

You can request a U.S. Section 508 Voluntary Product Accessibility Template (VPAT) containing details on accessibility compliance at

http://www-3.ibm.com/able/product_accessibility/index.html

Section 508 of the U.S. Rehabilitation Act

IBM System i models are capable, when used in accordance with IBM's associated documentation, of satisfying the applicable requirements of Section 508 of the Rehabilitation Act, provided that any assistive technology used with the product properly interoperates with it.

Product positioning

The model 525 hardware is physically identical to the 1.9 GHz 1/2-way model 520. The memory maximum, I/O maximums, available I/O features, and Capacity on Demand capabilities are the same. All 525 systems have full 5250 OLTP capability and do not use Enterprise Enablement features.

The model 525 Express Configurations have the same upgrade paths from the 810/520 as the 1/2-way 520 Enterprise Edition. Upgrades into the 525 CBU Configuration from model 520 CBU editions are supported. Upgrades from model 810 to a 525 CBU configuration are not available. The software tier of the model 525 is P10, compared to the model 520 software tier of P10 and the 520 1/2-way software tier of P20.

The primary difference between the model 525 and the model 520 1/2-way is the licensing of i5/OS user entitlements. The model 525 includes i5/OS entitlements for a minimum of 30

concurrent i5/OS users and can be increased up to an unlimited user entitlement. Unlimited external user licensing is another chargeable feature, providing additional flexibility. The model 520 licensing has an unlimited number of i5/OS users.

The model 525 has significantly greater configuration options than the model 515.

- Provides licensing options for more than 40 concurrent i5/OS users
- Supports larger maximums of memory, disk, and other I/O
- Supports more types of I/O options
- Offers Capacity on Demand processor abilities

Feature descriptions

Following are the descriptions, in numeric order, for all new features in this announcement.

Attributes, as defined in the descriptions, state the interaction of requirements among features.

Minimums and maximums are the absolute limits for a single feature without regard to interaction with other features. The maximum valid quantity for MES orders may be different than for initial orders. The maximums in the following list refer to the largest quantity of these two possibilities.

The order type defines whether a feature is orderable only on initial orders, only on MES orders, on both initial and MES orders, or if a feature is supported on a model only as a result of a model conversion.

(#0909) — 1/2W Serv Feat 525 1x8330: #0909 is a server feature for the model 525 with a #8330 processor feature code.

- For 9406-525: (#0909)
 - Minimum required: 1
 - Maximum allowed: 1 (Initial order maximum: 1)
 - OS level required: i5/OS V5R4, or later
 - Initial Order/MES/Both/Supported: Both
 - CSU: Yes

(#5570) — 5727 Cache + 2 70GB Disk Pkg: This package provides one #5727 Integrated Cache — 40MB and two #4327 15k rpm 70.56GB Disk Units.

#5727 provides 40MB write cache for the imbedded disk controller in the 515, 520, 525 and also enables RAID-5 capability. The 5727 is installed in its own specific internal slot of the system unit and does not require a PCI slot.

On IBM ordering, shipping, and inventory documentation, the component features specifically for the #5727 and #4327 disk units will not be shown. The chargeable #5570 feature number will be shown and will carry the price and warranty for this package.

- Attributes provided: 40MB write cache, RAID-5 data protection for system unit disk drives, and two 70GB disk drives
- · Attributes required: Unused write cache slot in the system unit and two unused disk slots.
- For 9406-525: (#5570)
 - Minimum required: 0
 - Maximum allowed: 1 (Initial order maximum: 1)
 - OS level required: i5/OS V5R4, or laterInitial Order/MES/Both/Supported: Both
 - CSU: Yes

(#5571) — 5727 Cache + 6 70GB Disk Pkg: This package provides one #5727 Integrated Cache — 40MB and six #4327 15k rpm 70.56GB Disk Units.

The #5727 provides 40MB write cache for the imbedded disk controller in the 515, 520, 525 and also enables RAID-5 capability. The 5727 is installed in its own specific internal slot of the system unit and does not require a PCI slot.

On IBM ordering, shipping, and inventory documentation, the component features specifically for the #5727 and #4327 disk units will not be shown. The chargeable #5570 feature number will be shown and will carry the price and warranty for this package.

- Attributes provided: 40MB write cache, RAID-5 data protection for system unit disk drives, and six 70GB disk drives
- Attributes required: Unused write cache slot in the system unit and two unused disk slots. The model 515 has 5592/5593 as a prerequisite.
- For 9406-525: (#5571)
 - Minimum required: 0
 - Maximum allowed: 1 (Initial order maximum: 1)
 - OS level required: i5/OS V5R4, or later
 - Initial Order/MES/Both/Supported: Both
 - CSU: Yes

(#6910) — **525 CBU Configuration 1:** #6910 provides an edition feature designating a Capacity BackUp Configuration for a model 525 with processor feature #8330 and server feature #0909.

- Attributes provided: Model 525 Capacity BackUp Solution Configuration
- For 9406-525: (#6910)
 - Minimum required: 0
 - Maximum allowed: 1 (Initial order maximum: 1)
 - OS level required: i5/OS V5R4, or later
 - Initial Order/MES/Both/Supported: Both
 - CSU: Yes

(#7790) — **525 Express Configuration 1:** #7790 provides an edition feature designating an Express Configuration of a 9406-525 system with server feature #0909 and processor feature #8330.

- Attributes provided: Model 525 Express Configuration
- For 9406-525: (#7790)
 - Minimum required: 0
 - Maximum allowed: 1 (Initial order maximum: 1)
 - OS level required: i5/OS V5R4, or later

- Initial Order/MES/Both/Supported: Both
- CSU: Yes

(#7791) — **525 Express Configuration 2:** #7791 provides an edition feature designating an Express Configuration of a 9406-525 system with server feature #0909 and processor feature #8330.

- Attributes provided: Model 525 Express Configuration
- For 9406-525: (#7791)
 - Minimum required: 0
 - Maximum allowed: 1 (Initial order maximum: 1)
 - OS level required: i5/OS V5R4, or later
 - Initial Order/MES/Both/Supported: Both
 - CSU: Yes

(#7792) — 525 Express Configuration 3: #7792 provides an edition feature designating an Express Configuration of a 9406-525 system with server feature #0909 and processor feature #8330.

- Attributes provided: Model 525 Express Configuration
- For 9406-525: (#7792)
 - Minimum required: 0
 - Maximum allowed: 1 (Initial order maximum: 1)
 - OS level required: i5/OS V5R4, or later
 - Initial Order/MES/Both/Supported: Both
 - CSU: Yes

Services

Global Technology Services

IBM services include business consulting, outsourcing, hosting services, applications, and other technology management.

These services help you learn about, plan, install, manage, or optimize your IT infrastructure to be an On Demand Business. They can help you integrate your high-speed networks, storage systems, application servers, wireless protocols, and an array of platforms, middleware, and communications software for IBM and many non-IBM offerings. IBM is your one-stop shop for IT support needs.

For details on available services, contact your IBM representative or visit

http://www.ibm.com/services/

For details on available IBM Business Continuity and Recovery Services, contact your IBM representative or visit

http://www.ibm.com/services/continuity

For details on education offerings related to specific products, visit

Select your country, and then select the product as the category.

Voltage: Model 525 and expansion units/towers #0595 and #5095 operate at low voltage (100 to 127 V ac) or high voltage (200 to 240 V ac). Expansion units/towers #0588, #5088, #5094, and #5294 operate at high voltage only.

The appropriate system power cord is added automatically by the configurator based on the country in which the order is placed. For default power cord, other power cord options, and additional technical planning information, refer to the iSeries planning Web site at

http://publib.boulder.ibm.com/iseries/

Select V5R4, then Site Map, and then Hardware Installation and Use.

Hardware requirements: System i model 525 requires i5/OS V5R4, or later.

Other operating systems that run on the System i model 525 are:

- AIX 5L[™] for POWER[™] V5.3, or later
- · Red Hat Enterprise Linux AS for POWER Version 4, or later
- SUSE LINUX Enterprise Server 9 for POWER, or later

Some features may require updates.

For additional prerequisite information, visit

http://www-912.ibm.com/e_dir/eServerPrereg.nsf

Planning information

Customer install of DASD IOA feature conversions with return of parts: The following feature conversions are designated as customer install responsibility. You are responsible for planning and installing these feature conversions, and you are required to return parts to IBM. Return parts shipping details are defined in the MES instructions.

Cable orders: No cable orders required

Supplies:

Tape cartridges

• 30GB 1/4-inch Cartridge Tape Units

Data cartridges (write and read):

- -- IBM SLR60-37.5GB (24R0146) 37.5GB
- -- IBM SLR60-30GB (19P4209) 30GB
- -- IBM SLR100-5GB (35L0661) 5GB
- 50GB 1/4-inch Cartridge Tape Units

Data cartridges (write and read):

- -- IBM SLR100-50GB (35L0968) 50GB
- -- IBM SLR60-37.5GB (24R0146) 37.5GB
- -- IBM SLR60-30GB (19P4209) 30GB
- IBM SLR100-5GB (35L0661) 5GB
- 36 GB DAT72 4-mm tape drives

Data cartridges (write and read):

- -- IBM DDS3 Data Cartridge (59H3465) 12GB
- -- IBM DDS4 Data Cartridge (59H4456) 20GB
- -- IBM DAT72 Data Cartridge (18P7912) 36GB

Cleaning cartridges

• 36 GB DAT72 4-mm tape drives

Test and cleaning cartridges

- -- IBM DAT72 Cleaning Cartridge (21F8763)
- -- IBM Test Cartridge (59H4457)

All data cartridge capacities shown are uncompressed.

Sales and support

You can get assistance, answers to product-related questions, or arrange for a warranty product replacement — with just one call. To locate your nearest source for ordering IBM media products, call the following numbers worldwide:

888-IBM-MEDIA (426-6334) in the U.S. and Canada

- +1-972-881-0733 in Latin America and Asia/Pacific
- +31-433-502-756 in Europe, the Middle East and Africa
- +81-3-3808-8486 in Japan

For additional product information and country-specific phone numbers, visit

http://www.ibm.com/storage/media

Security, auditability, and control

System i uses the security and auditability features of IBM i5/OS. Use of these facilities is optional. The security measures supplied by i5/OS are designed to reduce the risk of users changing or destroying data resources, but do not prevent it. The i5/OS security features include the use of passwords, a security option to limit a user to only functions provided by customer-designed menus, and a security option to limit read/write access for files, libraries, and folders during normal operations. To achieve increased security, the i5/OS controls should be combined with physical security, division of duties, and other appropriate measures. The customer is responsible for evaluation, selection, and implementation of security features, administrative procedures, and appropriate controls in application systems and communications facilities.

IBM Electronic Services

IBM has transformed its delivery of hardware and software support services to put you on the road to higher system availability. Electronic Services is a Web-enabled solution that offers an exclusive, no-additional-charge enhancement to the service and support available for IBM servers. These services provide the opportunity for greater system availability with faster problem resolution and preemptive monitoring. Electronic Services comprises two separate, but complementary, elements: Electronic Services news page and Electronic Services Agent.

The Electronic Services news page is a single Internet entry point that replaces the multiple entry points traditionally used to access IBM Internet services and support. The news page enables you to gain easier access to IBM resources for assistance in resolving technical problems.

The Electronic Service Agent™ is no-additional-charge software that resides on your server. It monitors events and transmits system inventory information to IBM on a periodic, client-defined timetable. The Electronic Service Agent automatically reports hardware problems to IBM. Early knowledge about potential problems enables IBM to deliver proactive service that may result in higher system availability and performance. In addition, information collected through the Service Agent is made available to IBM service support representatives when they help answer your questions or diagnose problems.

To learn how Electronic Services can work for you, visit

http://www.ibm.com/support/electronic

Terms and conditions

IBM credit corporation financing: Yes

Warranty period: One year

Warranty service: If required, IBM provides repair or exchange service depending on the type of warranty service specified for the machine. IBM will attempt to resolve your problem over the telephone, or electronically via an IBM Web site. You must follow the problem determination and resolution procedures that IBM specifies. Scheduling of service will depend upon the time of your call and is subject to parts availability.

Service levels are response time objectives and are not guaranteed. The specified level of warranty service may not be available in all worldwide locations. Additional charges may apply outside IBM's normal service area. Contact your local IBM representative or your reseller for country- and location-specific information.

Customer replaceable unit (CRU) service: If your problem can be resolved with a CRU (keyboard, mouse, speaker, memory, HDD and other easily replaceable parts), IBM will ship these parts to you for replacement by you. If IBM instructs you to return the replaced CRU, you are responsible for returning it to IBM in accordance with IBM's instructions. If you do not return the defective CRU, if IBM so instructs, within 15 days of your receipt of the replacement CRU, IBM may charge you for the replacement.

On-site service: IBM on-site repair (IOR), 24 hours per day, 7 days a week, same-day response. IBM will repair the failing machine at your location and verify its operation. You must provide a suitable working area to allow disassembly and reassembly of the IBM machine. The area must be clean, well-lit, and suitable for the purpose.

Warranty service upgrades and maintenance service options: For ServiceElect (Z125-5510) and ServiceSuite™ (Z125-5745) Statements of Work

IOR, 24 hours a day, 7 days a week, same-day response

Maintenance services: IOR, 24 hours a day, 7 days a week, same-day response

Usage plan machine: No

IBM hourly service rate classification: Two

When a type of service involves the exchange of a machine part, the replacement may not be new, but will be in good working order.

Field-installable features: Yes

Model conversions: No

Machine installation: Customer setup. Customers are responsible for installation according to the instructions IBM provides with the machine.

Graduated program license charges apply: Yes

The following processor groups apply for software with graduated charges.

Machi n type	e Model	Edi ti on	Processor Group
9406	525	7790 Express Configuration 1	P10
9406	525	7791 Express Configuration 2	P10
9406	525	7792 Express Configuration 3	P10
9406	525	6910 CBU Configuration 1	P10

Licensed Machine Code: IBM Machine Code is licensed for use by a customer on the IBM Machine for which it was provided by IBM under the terms and conditions of the IBM License Agreement for Machine Code, to enable the machine to function in accordance with its specifications, and only for the capacity authorized by IBM and acquired for the customer.

Machine Code may sometimes be referred to as "Licensed Internal Code" or "LIC" in documentation or on the machine with which the Machine Code was delivered. All such code, whether referred to or marked as Machine Code, Licensed Internal Code or LIC is subject to the IBM License Agreement for Machine Code.

Should it become necessary for IBM to make changes to Machine Code, IBM will make the changes available at the IBM System i technical support page on ibm.com. If the machine does not function as warranted and your problem can be resolved through your application of Machine Code changes, you are responsible for downloading and installing the designated Machine Code changes as IBM specifies. You may request IBM to install Machine Code changes; however, you may be charged for the installation of such changes.

You can obtain a copy of the agreement at the following Web site or by contacting your IBM representative.

http://www-1.ibm.com/servers/support /machine_warranties/machine_code.html

Machine using LMC Type Model: 9406-525

Educational allowance: A reduced charge is available to qualified education customers. The educational allowance may not be added to any other discount or allowance.

The educational allowance is 15% for the products in this announcement.

For ServiceElect (ESA) maintenance service charges, contact IBM Global Services at 888-IBM-4343 (426-4343).

IBM Global Financing: IBM Global Financing offers competitive financing to credit-qualified customers to assist them in acquiring IT solutions. Offerings include financing for IT acquisition, including hardware, software, and services, from both IBM and other manufacturers or vendors. Offerings (for all customer segments: small, medium, and large enterprise), rates, terms, and availability can vary by country. Contact your local IBM Global Financing organization or visit

http://www.ibm.com/financing

IBM Global Financing offerings are provided through IBM Credit LLC in the United States, and other IBM subsidiaries and divisions worldwide to qualified commercial and government customers. Rates are based on a customer's credit rating, financing terms, offering type, equipment type, and options, and may vary by country. Other restrictions may apply. Rates and offerings are subject to change, extension, or withdrawal without notice.

Financing solutions from IBM Global Financing can help you stretch your budget and affordably acquire the new product. But beyond the initial acquisition, our end-to-end approach to IT management can also help keep your technologies current, reduce costs, minimize risk, and preserve your ability to make flexible equipment decisions throughout the entire technology life cycle.

To order, contact the Americas Call Centers, your local IBM representative, or your IBM Business Partner.

To identify your local IBM representative or IBM Business Partner, call 800-IBM-4YOU (426-4968).

Phone: 800-IBM-CALL (426-2255)
